

## Recitation-2 : Notes (Data Structures)

### ① Big (O) Notation.

Possible ways to judge a program -

- ① Time it takes to run. — ? on who's machine
- ② Flops it takes — in which language?

Algorithm  $\neq$  program

We want a way to verify "quality" of a language — irrespective of other factors.

eg  $O(1) \rightarrow$  fix elem. lookup.

Array Size	time	} $O(1)$
5	5 sec	
10	5 sec	
10000	5 sec	
$10^{30}$	5 sec	

eg  $O(n)$  2 sum

Array  
Size

time

1

1 sec

10

10 sec

1000

1000 sec

$10^{40}$

$10^{40}$  sec

time

array size

eg  $O(\log n) \rightarrow$  Binary Search

Array Size

time

10

5 sec

100

10 sec

1000

20 sec

$10^{10}$

30 sec

100 sec

time

array size

# Strings and Arrays :-

Two  
Pointer  
Algo

Sliding  
window

Prefix  
Sum

- when the array is sorted

"Subarray"  
questions

- when Qs  
is looking  
to add  
things /  
difference

- when you  
are looking  
to get combinatio  
of '2' elements

- It Qs has a:-  
\* Constraint  
\* Measure
